

NAVAL FUNDAMENTALS. E-LEARNING CLASSIC

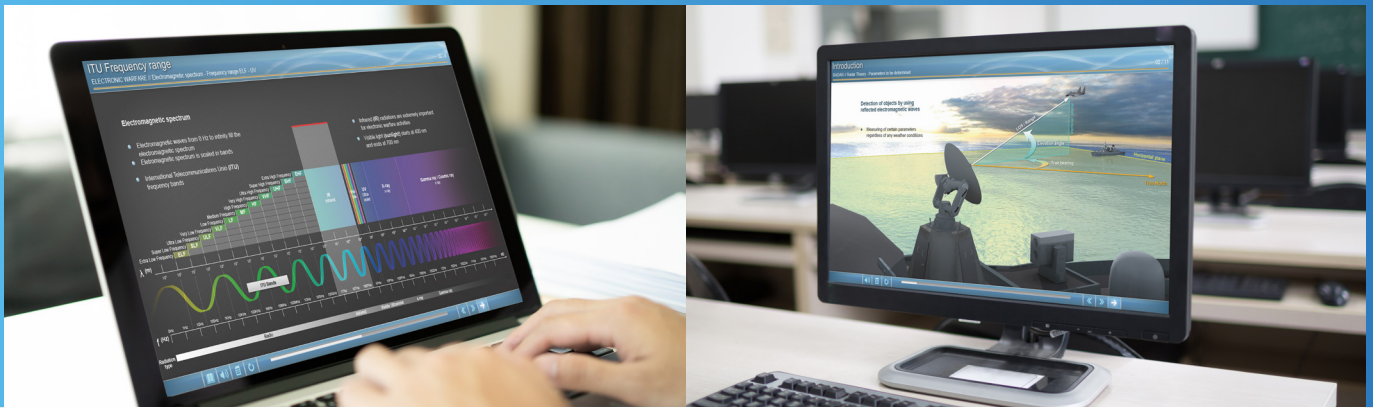

Effective and motivating preparation for practice on board: Basic Naval Training

Fundamental training for naval cadets on Sonar, Radar,
Electronic Warfare and Naval Communication according to
international standards

benntec.

OVERVIEW

- Web-Based-Training for naval cadets with 29 courseware units (one courseware unit equaling approx. 45 minutes learning time)
- Learners acquire basic knowledge regarding the themes/modules: Sonar, Radar, Electronic Warfare, Naval Communication
- Lessons according to international standards
- With practice-oriented tests and examinations for learning success control
- Designed and realized based on state-of-the-art methodology and didactics
- Lessons can be used for self-paced and instructor-led training within a blended learning concept
- The lessons are available as a learning series or as single modules
- Produced in english
- SCORM compliant for integration into a learning management system

Vivid knowledge transfer with immediate feedback on the learning progress

Extensive theoretical and also practical basic knowledge is required for naval cadets on board. Conventional teaching is mostly only conditionally suitable for conveying this knowledge; it often remains abstract due to missing or imperfect illustration.

The Web-Based-Training (WBT) “Naval Fundamentals” introduces naval cadets in 29 courseware units to the basics of Sonar, Radar, Electronic Warfare and Naval Communication. The learning program has been developed based on state-of-the-art instructional design methodology and didactics. It provides learners with an attractive training solution that visualizes abstract matters with high-quality animations. It confronts learners with complex, practice-oriented tasks and challenges them to apply the newly acquired knowledge in tests and examinations, thus providing them with an immediate feedback about their learning progress.

Valuable aid for the instructor

The contents of the WBT are modular. Individual learning steps can be compiled from all lessons, either individually or for specific learning groups. Basic knowledge can thus be taught in a shorter time and the instructor can provide the cadets with much more differentiated and targeted support. In this way, the training institution is enabled to work through existing deficits in the basic topics with pinpoint accuracy. The WBT is SCORM compatible and can be integrated into a learning management system, e.g. the NATO-certified learning management system ILIAS, to manage students and learning content.
