

# SeCon meets Learning

---

**The secure all-in-one platform for companies, organizations and authorities in security-related areas that work with classified information**

Smart system solution with the secret protection software “SeCon-Personal” and integrated learning platform for automated organization, implementation and verification management of training courses on handling classified information and protecting business secrets

benntec.

# SeCon meets Learning

## COMPONENTS

The all-in-one system solution comprises three components that are perfectly interlinked:

- SeCon, the software for secret and sabotage protection
- LEXAnow, the learning platform for the provision and the management of learning materials
- Memorable and motivating learning content in modules – each training course with final test and certificate

## LEARNING MODULES

### SCORM compatible

- VS-NfD modules 1 and 2
- Personnel secret protection
- Material secrecy protection
- Further topics planned

## SAFETY & TECHNOLOGY

- Highest security standard
- Available as on-premise solution or Saas-solution
- Regular updates
- Access to learning modules via configurable authentication

## Noticeable workload reduction and time savings

As the central security body in companies, security authorized representatives are responsible for the implementation and documentation of the prescribed training of employees in the area of VS-NfD (sensitive information) and higher (secret and top secret information). Even when using the established software SeCon-Personal from Nord-Tec, this task takes a lot of time.

Thanks to the smart linking of the SeCon-software with LEXAnow, a learning platform developed by benntec on which digital training courses on VS-NfD basics and other security topics are provided, the time required for security representatives is minimized. The organization, implementation and verification of the training courses is uncomplicated and takes place “all-in-one”. Personal data is only processed in the proven SeCon-system.

## More quality and safety in the entire process

The learning content for the platform “SeCon meets Learning” was didactically conceived by benntec and implemented by means of storytelling in a motivating and memorable way. The high quality of the training courses, the consistency of the information conveyed, and the complete documentation create – as an optimal supplement to personal instruction – legal certainty for security representatives. Employees can carry out their mandatory training independently of time – even in the home office. Further advantages of the platform are its actuality and the modularity of the learning content: Adaptations to changes in legislation or additional learning modules and language versions can be integrated easily and quickly.
